

# ***GMOs in Food: The Science and The Risk***

## ***Signature Gathering Training [Capacitación tambien en español]***

***Hosted by Community Roots Garden***

A large percentage of corn grown in the US is genetically engineered to produce a pesticide that protects the plant from certain pests. Over 90% of soybeans are modified to tolerate repeated sprays of Roundup herbicide.

Genetic alterations like these have a potential to be incorporated into other organisms in unpredictable ways and contaminate organic food. What are the implications? Are Americans entitled to know which foods contain genetic modifications? Learn what Californians are doing to put the Right to Know question to a vote this November.

**Thursday, February 9, 6:30 – 8:30 pm**
