The Magnum Insect-A-Peel Assembly holds a reel with a 50 foot long tube of yellow sticky plastic. Two brackets hold a 29 inch long by 3 inch diameter PVC pipe. The plastic tube slides easily over the tube and fastens to a take-up reel at the bottom of the unit. A heavy-duty socket holds the unit horizontal or at a 45° angle on a 30 inch post.

Flying insects are instantly attracted to and trapped in the plastic. When the plastic is coated with insects, rolling the take-up reel pulls the plastic tube exposing continuous fresh sticky surface.

Hanging mini traps are also available with 3" X 25' sticky banners.

Unroll the lead end of plastic roll of tubing (not coated with sticky material) over end of 3" plastic pipe. Then, roll the lead end over the take-up reel. For hard floor greenhouses, a wooden base or tripod can be used (not supplied).

INSECT-A-PEEL trap's represent the latest technological advances in the use of sticky surfaces and color attraction to monitor, catch, and kill flying insect pests.

The unique design and features of the INSECT-A-PEEL provide a level of effectiveness and economic value far superior to "sticky traps" of the past. This has added hundreds of new uses for agricultural and animal health professionals as well as homeowners and livestock owners.

HOW IT WORKS

The INSECT-A-PEEL trap's tubular shaped yellow surface reflects light 360° outward attracting insects from all directions. As the insects fly towards the reflected light they are caught in the trap's thick, sticky coating and die. For night flying insects, pheromones and scents can be placed on the trap to catch pests even at night!

When the surface of the sticky tube is covered with dead insects, the uniqueness of this trap becomes obvious. Unlike other traps that you discard, you recharge the bright yellow color and sticky surface in a simple process that takes only a few minutes.

The plastic tubing that holds the dead insects is rolled onto the discard reel and at the same time fresh, clean sticky tubing is exposed from the supply reel. The trap is now just as effective as when it was new. Simple!

When all the clean sticky tubing has been used from the supply reel, the discard reel is thrown away along with all the dead insects. New supply and discard reels can be attached to the steel framework and the trap is like new. SIMPLE!

HOW LONG IT WORKS

The INSECT-A-PEEL traps catch pests 365 days a year during daylight hours. By attaching pheromones the trap can catch insect pests 24 hours a day. The plastic tube and sticky surface do not break down in sunlight and are water resistant.

Each trap will last up to 1 year under normal use.

MODELS TO CHOOSE FROM

MAGNUM: Our largest trap. Available in a standard "free standing" model for application near the ground or in a hanging model for application in trees, trellises, barns, buildings, landscaping, patios, etc...

MINI: Our smallest trap. Available in a hanging model for use in trees, trellises, barns, stalls, patios, etc, and a table top model for indoor use.

Replacement sticky supply reels are available in both the MAGNUM and MINI sizes. Standard reel color is bright yellow. The IPM version is available in both sizes with a continuous, 1" x 1" square grid pattern over a yellow background.
